

Ultra rapid dUT1 e-VLBI sessions with two Europe-Japan baselines

Y. Koyama¹, M. Sekido¹, K. Wada², S. Kurihara²,
R. Haas³, A. Mujunen⁴, and J. Ritakari⁴

1 Kashima Space Research Center, NICT, Japan

2 Geographical Survey Institute, Japan

3 Onsala Space Observatory, Chalmers University of Technology, Sweden

4 Metsähovi Radio Observatory, Helsinki University of Technology, Finland

Ultra Rapid dUT1 e-VLBI Session

- ✘ Intensive type (~1 hour) sessions optimally scheduled for dUT1 measurements
- ✘ Stations
 - + Kashima (34m)
 - + Tsukuba (32m)
 - + Onsala (20m)
 - + Metsähovi (14m)
 - + plus Wettzell (20m) if INT2 session is used
- ✘ Realtime data transfer and quasi-realtime correlation for rapid dUT1 estimation

How

Metsahovi (14m)

Tsunami (UDP)
Data transfer in real-time

Tsukuba (32m)

Onsala (20m)

Tsunami (UDP)
Data transfer in real-time

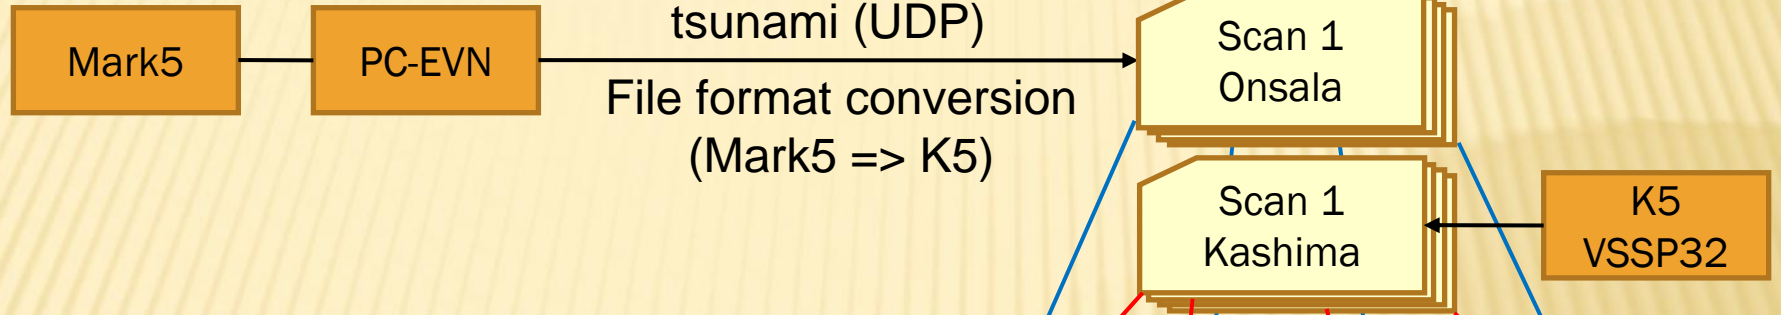

Kashima (34m)

Onsala side

Kashima side

Scan 1

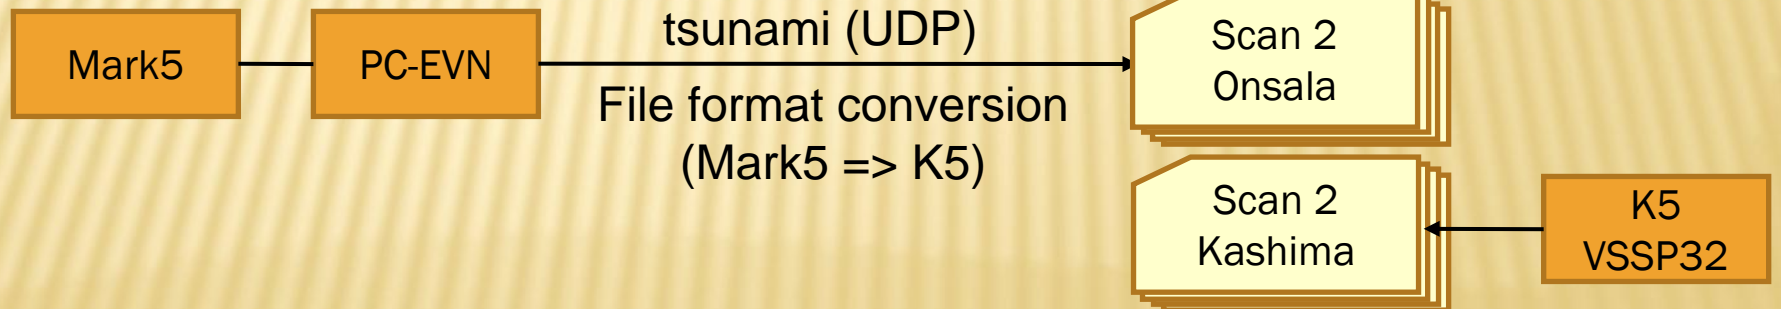

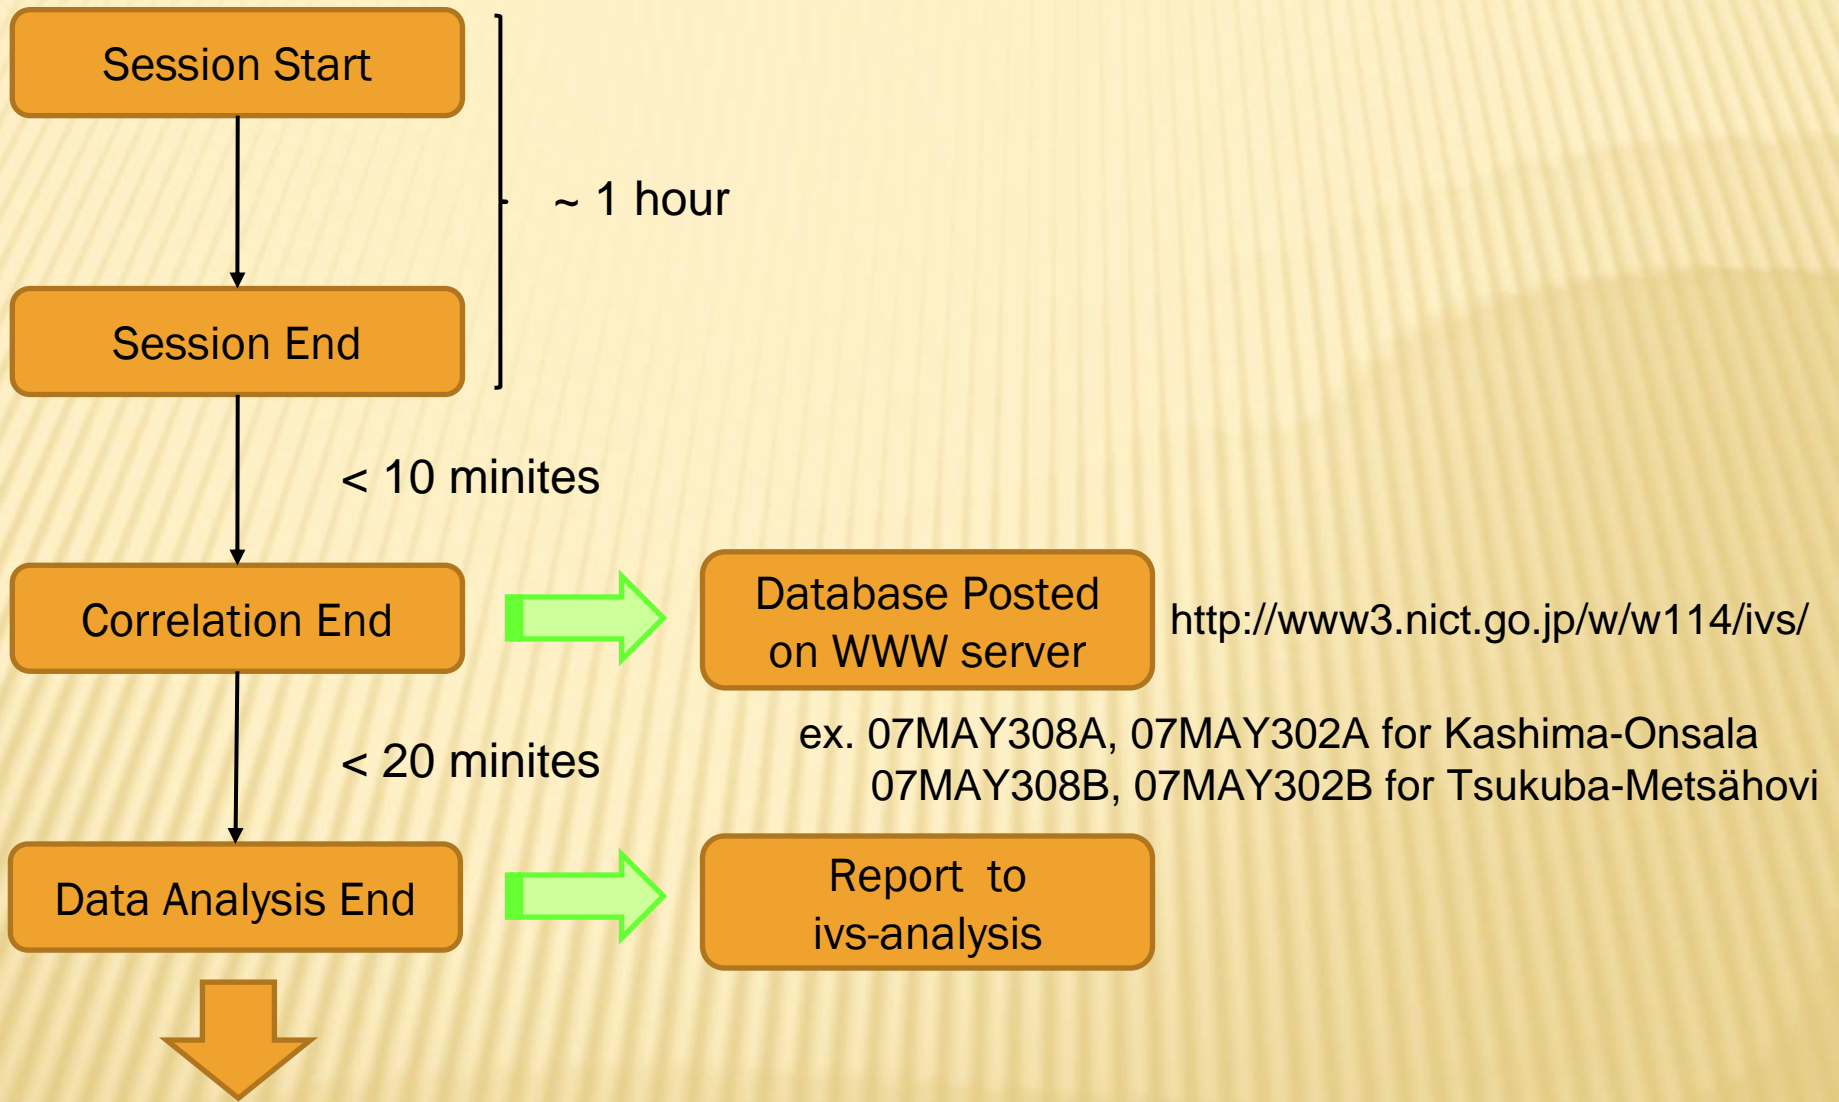

Scan Gap (Slewing)

Distributed software correlation starts during scan gap

Scan 2

Remaining 4 baselines are correlated after the session off-line, and the database files will be posted on the server at NICT.

Purpose

- ✘ To demonstrate ultra-rapid capability of estimating dUT1 value from intensive type e-VLBI sessions.
 - + Develop and improve software so that all the processes run smoothly and reliably.
 - + Make steady progress for regular IVS intensive sessions.
- ✘ To answer these questions :
 - + Does ultra-rapid software correlation give consistent results with the other routine IVS sessions?
 - + Do the dUT1 results on almost parallel baselines agree?
 - + How close to real-time can the dUT1 results be derived routinely?
 - + What is the impact of different scheduling options on the dUT1 results?
 - + What is the impact of different data rates (e.g. 128, 256, 512 Mbps) on the dUT1 results?

Proposal to IVS Observing Program Committee

- ✘ Official proposal to the IVS Observing Program Committee was submitted in July 2007.
- ✘ The proposal was approved and endorsed by the committee.
 - + Various comments and suggestions : Use existing intensive sessions (like INT2 with Tsukuba-Wettzell baseline) if Metsähovi station is not available.

e-VLBI in the beginning

Key Stone Project (1995-2000)

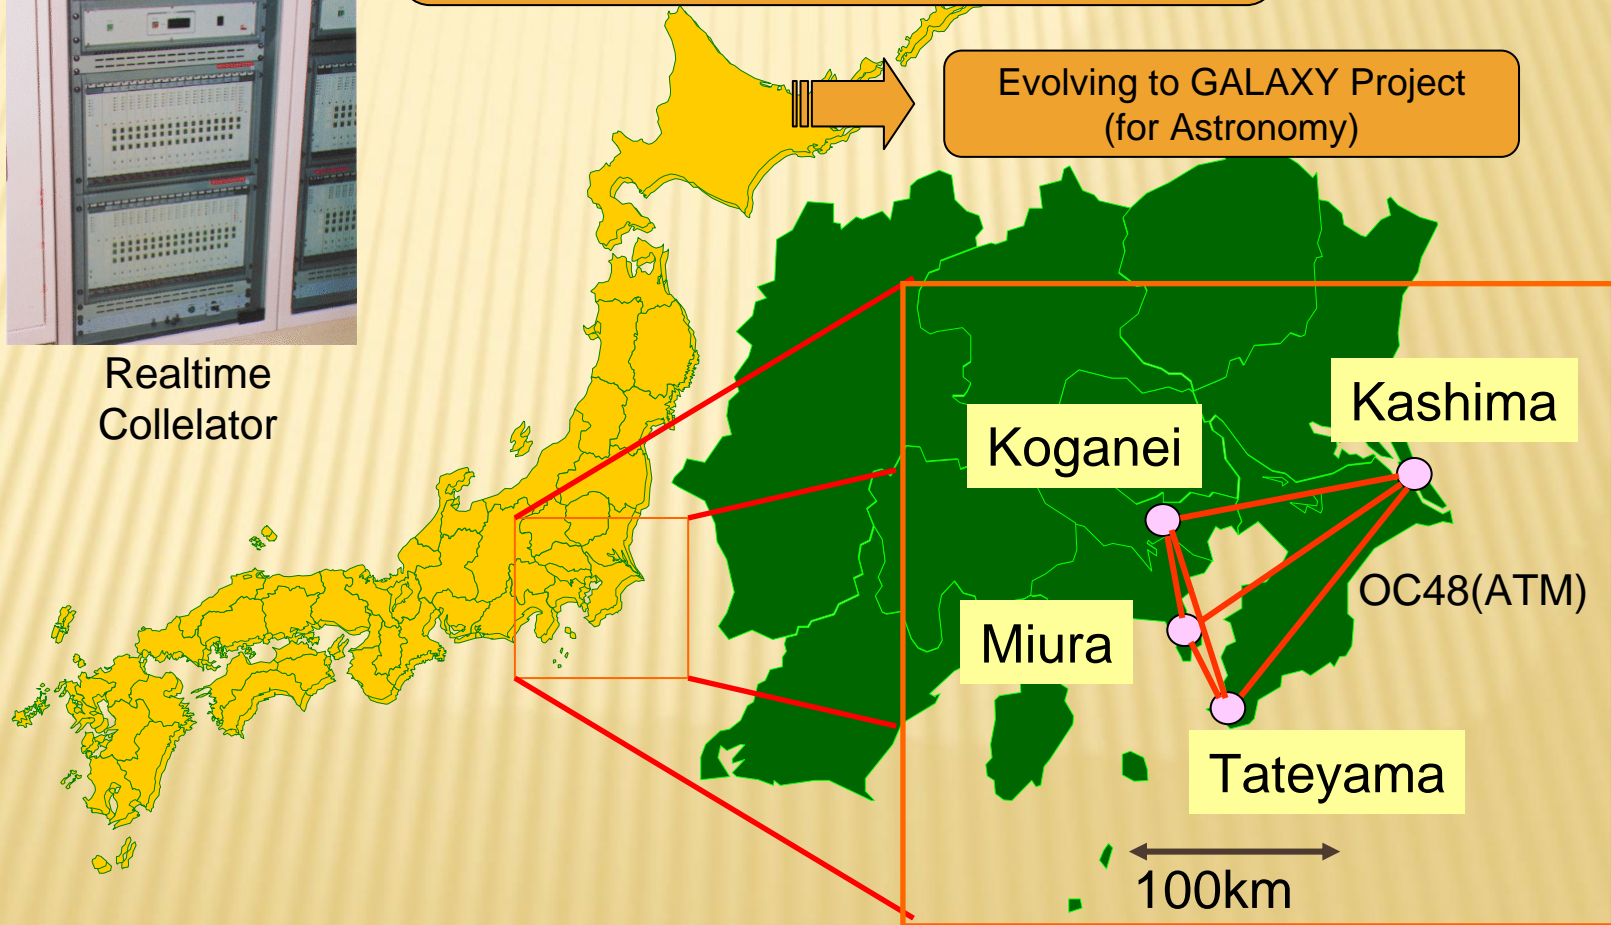

ATM Data
Transfer Unit

Realtime
Collimator

Realtime e-VLBI at 256Mbps (1998~)
Automated Observations & Processing

Evolving to GALAXY Project
(for Astronomy)

VLBI Systems : From K3 to K5

K3 Correlator (Center)
K3 Recorder (Right)

K3 System

1983~
Longitudinal Recorder
Open Reel Tapes
Hardware Correlator

K4 Terminal

K4 System

1990~
Rotary Head Recorder
Cassette Tapes
Hardware Correlator
e-VLBI with ATM

K4 Correlator

K5 Data Acquisition
Terminal

K5 System

2000~
PC based system
Hard Disks
Software Correlator
e-VLBI with IP

Concept of the K5 System

	K3	K4	K5
Data Recorders	Magnetic Tapes Longitudinal Recorders	Magnetic Tapes Rotary Head Recorders	Hard Disks
e-VLBI	Telephone Line	ATM	IP
Correlators	Hardware	Hardware	Software
	1983~	1990~	2002~
	M96 Recorder, K3 Formatter, K3 VC, K3 Correlator	DIR-1000, -L -M, DFC1100, DFC2100, K4 VC (Type-1, 2), TDS784, ADS1000, GBR1000, GBR2000D, K4 Correlator, KSP Correlators, GICO, GICO2	IP-VLBI (K5/VSSP, K5/VSSP32), PC-VSI (K5/VSI), ADS1000, ADS2000, ADS3000

Global e-VLBI : Historical Record

Rapid dUT1 Estimation – 2004.6.29 –

Kashima 34m

Baseline Length : 9502km

Westford 18m

- Estimated UT1 (variation of the Earth's rotation) in 4.5 hours.
- Software Correlation (20 CPUs).
- Observed data were recorded on hard disks and then transferred.
- K5 system was used at Kashima and Mark5 system was used at Westford.
- It has become routine operation for IVS (International VLBI Service) sessions.

K5/VSSP32 System

- ✗ Supports data rate up to 1024Mbps with 16ch.
- ✗ Easy to install to off-the-shelf Linux PC systems.
- ✗ Directly records data files to Linux file system.
- ✗ 5 Systems have been deployed.
 - + 1 at Tsukuba and 4 at Kashima
- ✗ Reliability has been improved and now used in the regular IVS sessions at Tsukuba and Kashima.
- ✗ Data transfer and correlation can be performed in parallel with recording.

K5/VSSP32 Unit

(~32Msample/ch·sec, ~4ch, ~8bits)

K5/VSSP32 System
(16ch System)

Specifications/Unit

Max Sampling Freq.	64 MHz
# of CH	1, 4
AD bit#	1, 2, 4, 8
Max Data Rate	256 Mbps

4 units for
16ch geodetic VLBI

Kashima-Onsala pilot experiment

- ✘ May 30, 2007
 - + Data Rate : 128Mbps
 - + Duration : 1 hour
 - + Correlation completed within a few minutes after the session.
 - + Version 1 database files were generated within less than 10 minutes after the session.
 - + Data analysis completed within less than 30 minutes after the session.

Comparisons of dUT1 from IERS Bulletin and Our Results

Sessions after the official proposal

✘ July 14, 2007

- + Onsala and Kashima in parallel with INT2 session between Wettzell and Tsukuba baseline (256Mbps). Online processing not successful. Offline processing was successful.

Baseline	UT1-TAI (ms)	sigma (usec)
Tsukuba-Wettzell	-	6.80
Tsukuba-Onsala	-	7.40
Kashima-Wettzell	-	5.33
Kashima-Onsala	-	9.25

✘ July 15, 2007

- + Onsala-Kashima baseline : Technical Test.

✘ September 4, 2007

- + Onsala-Metsähovi-Tsukuba : Trial to transfer two stations' data to Tsukuba simultaneously. Not successful from unknown reason. Off-line processing in progress.

33162.0781

Things to do

- ✘ Developments of automated database generation.
 - + A new database file structure based on NetCDF being developed.
 - + NetCDF \leftrightarrow Mark3 Database file conversion utility completed and available.
 - + Necessity to rely on Mark3 database handler library has been removed.
- ✘ Automated data analysis.
 - + Being realized with OCCAM software and NetCDF Database.
- ✘ Demonstrate robustness and reliability, and then introduce the same procedure to existing Intensive sessions (INT2)

Short term future plan

- ✘ Dry-run tests with four stations.
 - + Test without operating antenna. Just for data transfer and processing.
- ✘ Actual tests.
 - + Onsala-Kashima baseline + Metsähovi-Tsukuba baseline.
 - + Repeat several sessions.
- ✘ Preliminary reports.
 - + At IVS General Meeting : March 2008.

Conclusions

- ✘ Ultra-rapid dUT1 estimation within 30 minutes after the session was successfully demonstrated. Estimated results seem to be consistent with the final values from IERS Bulletin B.
- ✘ R&D proposal was submitted to IVS Observing Program Committee and was approved.
- ✘ Software developments and improvements are still necessary to fully automate the entire process, but it seems the work is straight forward.
