GPS/PPP Analysis

- DATA: GEONET/RINEX
 - KARAT reduced and Original
- period: 2008.1.1-12.31 (interval: 300sec.)
- Stations: 58 GEONET Stations
- mapping functions: VMF1, GMF
 - with gradient & w/o gradient
- Elevation cut off: 10°
- processing: GPStools Ver. 0.64(Takasu and Kasai [2003])

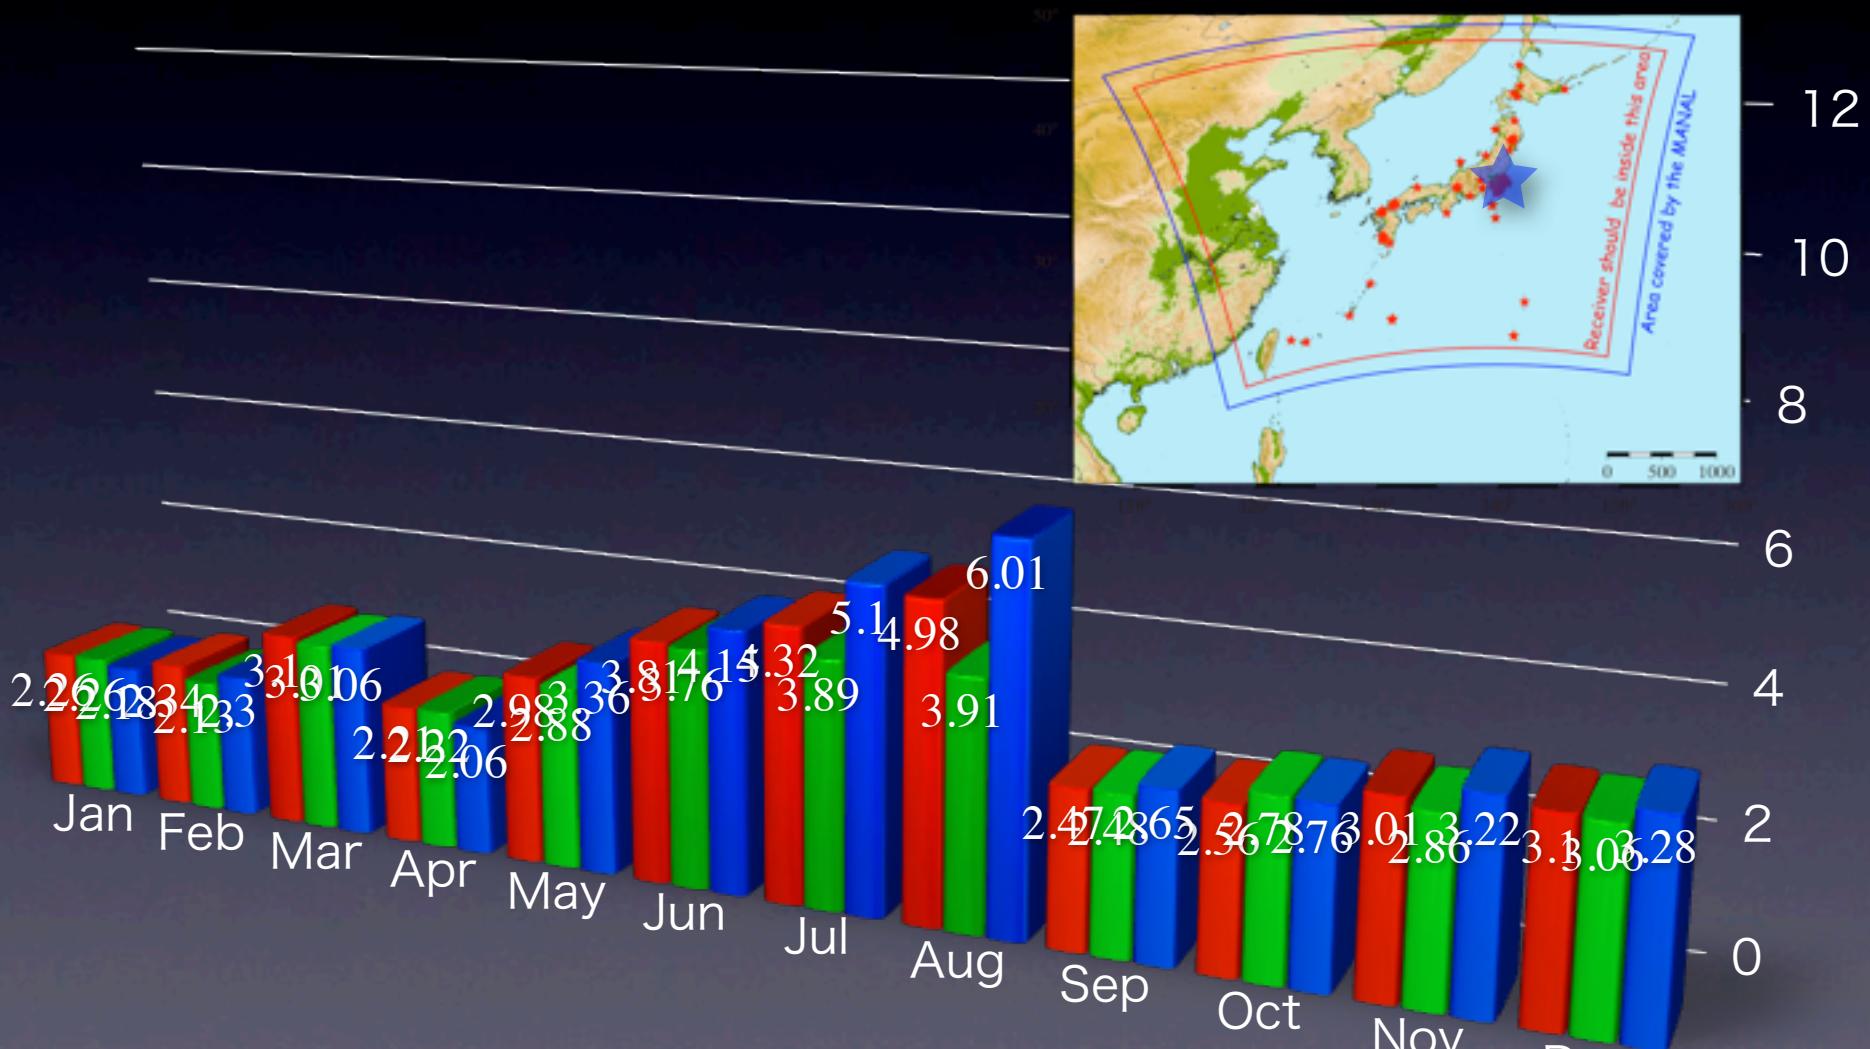

Study Field

You are user: richi

New
Dec. 1
Office

Time-span currently covered by KARATS: 2006/04/01 - 2008/12/30
(note: RINEX data outside this period will be rejected during KARATS processing)

(Your email address, please change this if you wish to receive the results by another address.)

Option 1: Ray-trace a single file:
 ファイルが選択されていません

Option 2: Ray-trace all files from web-accessible folder

for VLBI

The direct ray-tracing has the potential to improve UT1 estimates. [Boehm et al., JoG, 2010]

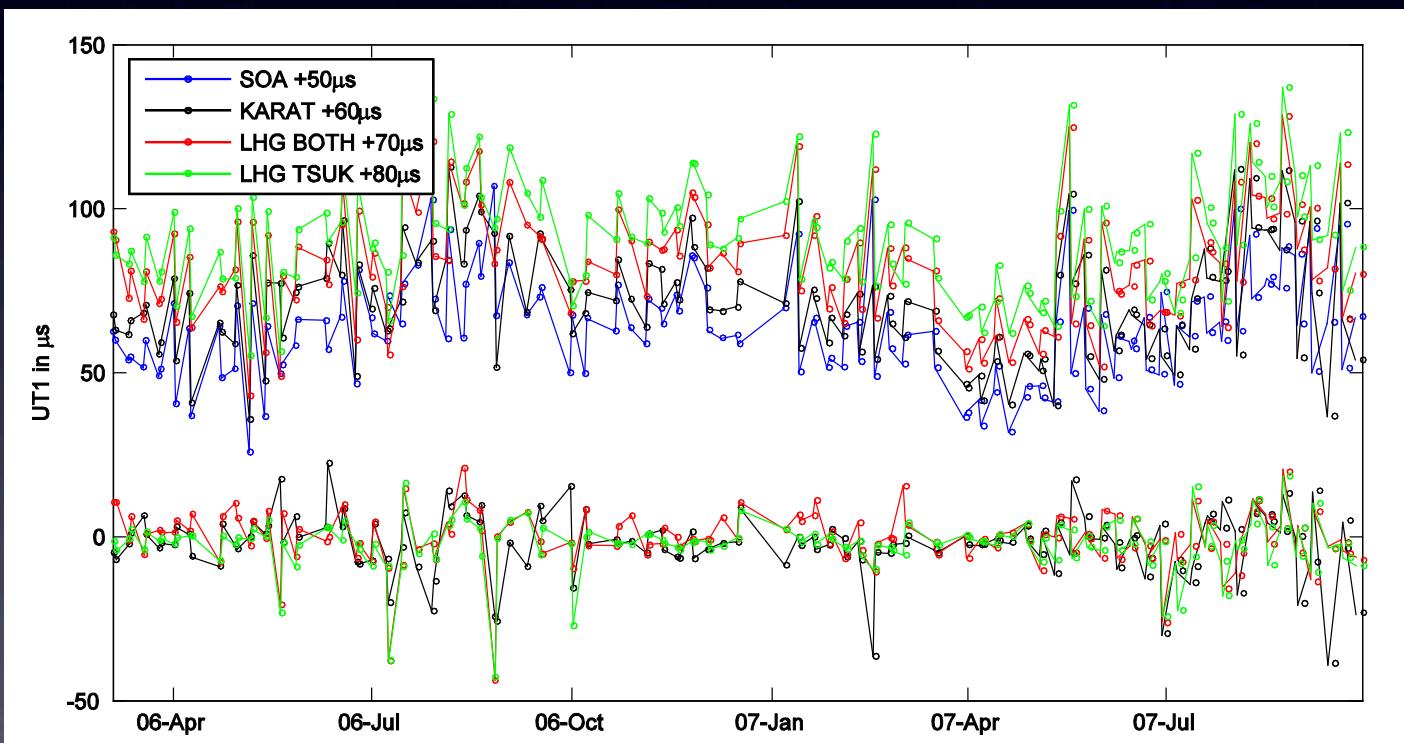

Figure 4 Hourly offsets of UT1 values for the INT2 sessions w.r.t. IERS 05 C04 (shifted by 50, 60, 70, and 80 μs for clarity). The differences are shown in the three lower lines (around zero) and they are in the sense KARAT/LHG minus SOA. The standard deviation of the differences is about 10 μs .

after Boehm
et al.[2010]

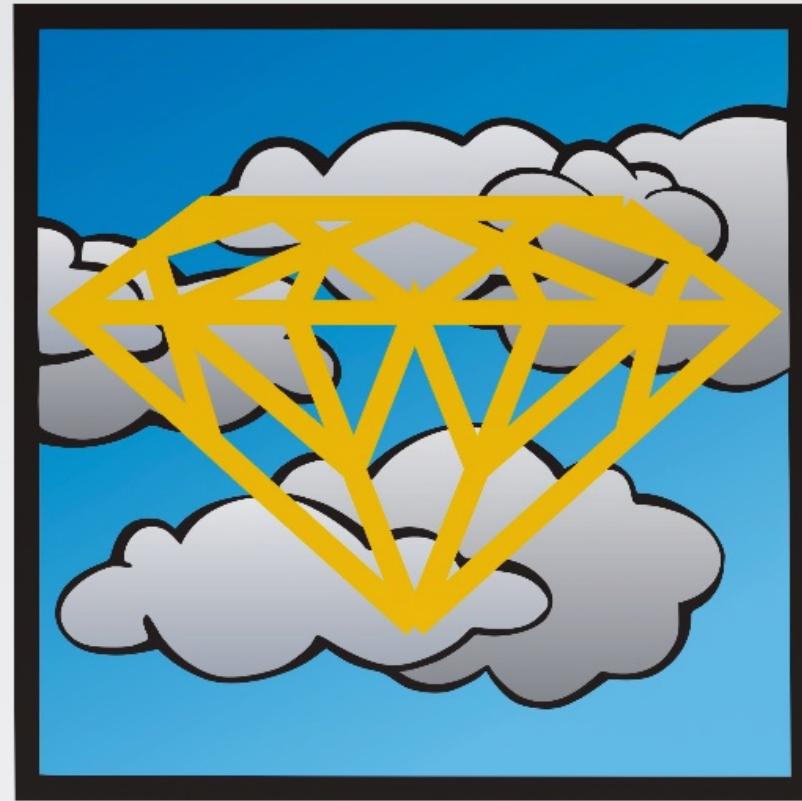

Concluding Remarks

- The KARAT solution is almost identical to the solution using VMF1 with linear gradient model
- The advantage of KARAT is an efficient reduction of atmospheric path delay with the numerical weather model improvement
- No big difference between Thayer Model and Eikonal Solver

Outlook

- We need more high speed for Eikonal solver processing!!
- **GPGPU technique**
- MANAL improvements
 - 5 km grid (after Apr. 7th, 2009)
 - Data assimilation of GPS PWV
(after Oct. 28, 2009)

Thank you for your attention
