Members of the GGOS Space Geodesy Network

Dear Colleagues,

We extend our appreciation for your participation on the GGOS Space Geodesy Network. Through your contributions, data products from the networks have steadily improved and new data products have been made possible.

Our most important GGOS application is the reference frame, for which we are now striving for mm data quality. Significant advances have been made by all of the Services; new stations are joining the network and many more are underway. In addition, other applications such as altimetry, gravity field, GNSS, ocean and climate science are relying on us to address their needs. But we still have exciting challenges ahead of us.

We enclose a Certificate of Participation in recognition of your contribution to the GGOS Network with VLBI, SLR, GNSS, and DORIS. We hope you will display it at your station.

Please send me an email to acknowledge that you have received these certificates.

If you have any questions, please do not hesitate to contact me.

With best regards,

Dr. Michael Pearlman
Director, GGOS Bureau of Networks and Observations
